

Tara Capobianco has provided financial and economic analysis and advice to a number of clients within the electric utility industry. Representative projects include the following:

- For a major utility, she conducted a market survey and feasibility analysis of a proposed entry in the Northeast retail market.
- For a large southeastern utility, Ms. Capobianco forecasted potential earnings opportunities associated with retail open access.
- For a number of clients, she has estimated the value of generating units and power contracts that incorporate various forms of "options" in their structure.
- For several utilities, she has assisted in the divestiture of fossil and nuclear generating facilities through auction and bilateral negotiation.
- For an Eastern utility, Ms. Capobianco developed a model to measure exposure to market electricity prices and uncertain customer shopping levels, and helped implement a risk management program.
- Ms. Capobianco has assisted in the development of retail access customer choice programs, including analysis of unbundled rates and stranded cost recovery mechanisms.

Before joining NorthBridge, Ms. Capobianco was an Associate at Analysis Group/Economics. Ms. Capobianco holds a B.A. in Economics from Middlebury College and an M.B.A. from the Tuck School of Business at Dartmouth College.
